

XDR + SIEM +SOC

VLATAM CyberSOC

- Tecnologías en Islas, analistas L1,L2 y L3 lidiando con el ruido y la fatiga de alerta.
- Tecnologías fuera del alcance de la mayoría de las organizaciones debido al alto Capex y Opex.

- DETECCIÓN proactiva de amenazas y CONTENCIÓN automática.
- La Mejor EFICACIA, EFICIENCIA Y ROI.

Un hacker roba en un casino colándose a través de una pecera

El mayor atraco del siglo: los ciberdelincuentes roban mil millones de dólares

El grupo Carbank robó en total 1 billón de dólares de docenas de bancos de todo el mundo.

 Alex Drozhzhin

16 Feb 2015

Carbanak: un robo de 1.000 millones de dólares Un ataque dirigido contra un banco

1. Infección

Puerta trasera
Carnabak enviada
como un adjunto

Empleado de banca

Mensajes de correo con exploits
Credenciales robadas

Cientos de equipos infectados en busca del PC admin

2. Obtención de inteligencia

Interceptación de las pantallas

Grabación

3. Suplantación del empleado

Cómo robaron el dinero

Banca online
Dinero transferido a las cuentas de los ciberpiratas

Sistemas de pago electrónico
Dinero transferido a bancos en EE.UU. y China

Aumento de saldos en cuentas
Fondos adicionales extraídos mediante transacciones fraudulentas

Control de cajeros automáticos
Instrucciones para entregar efectivo en un momento predeterminado

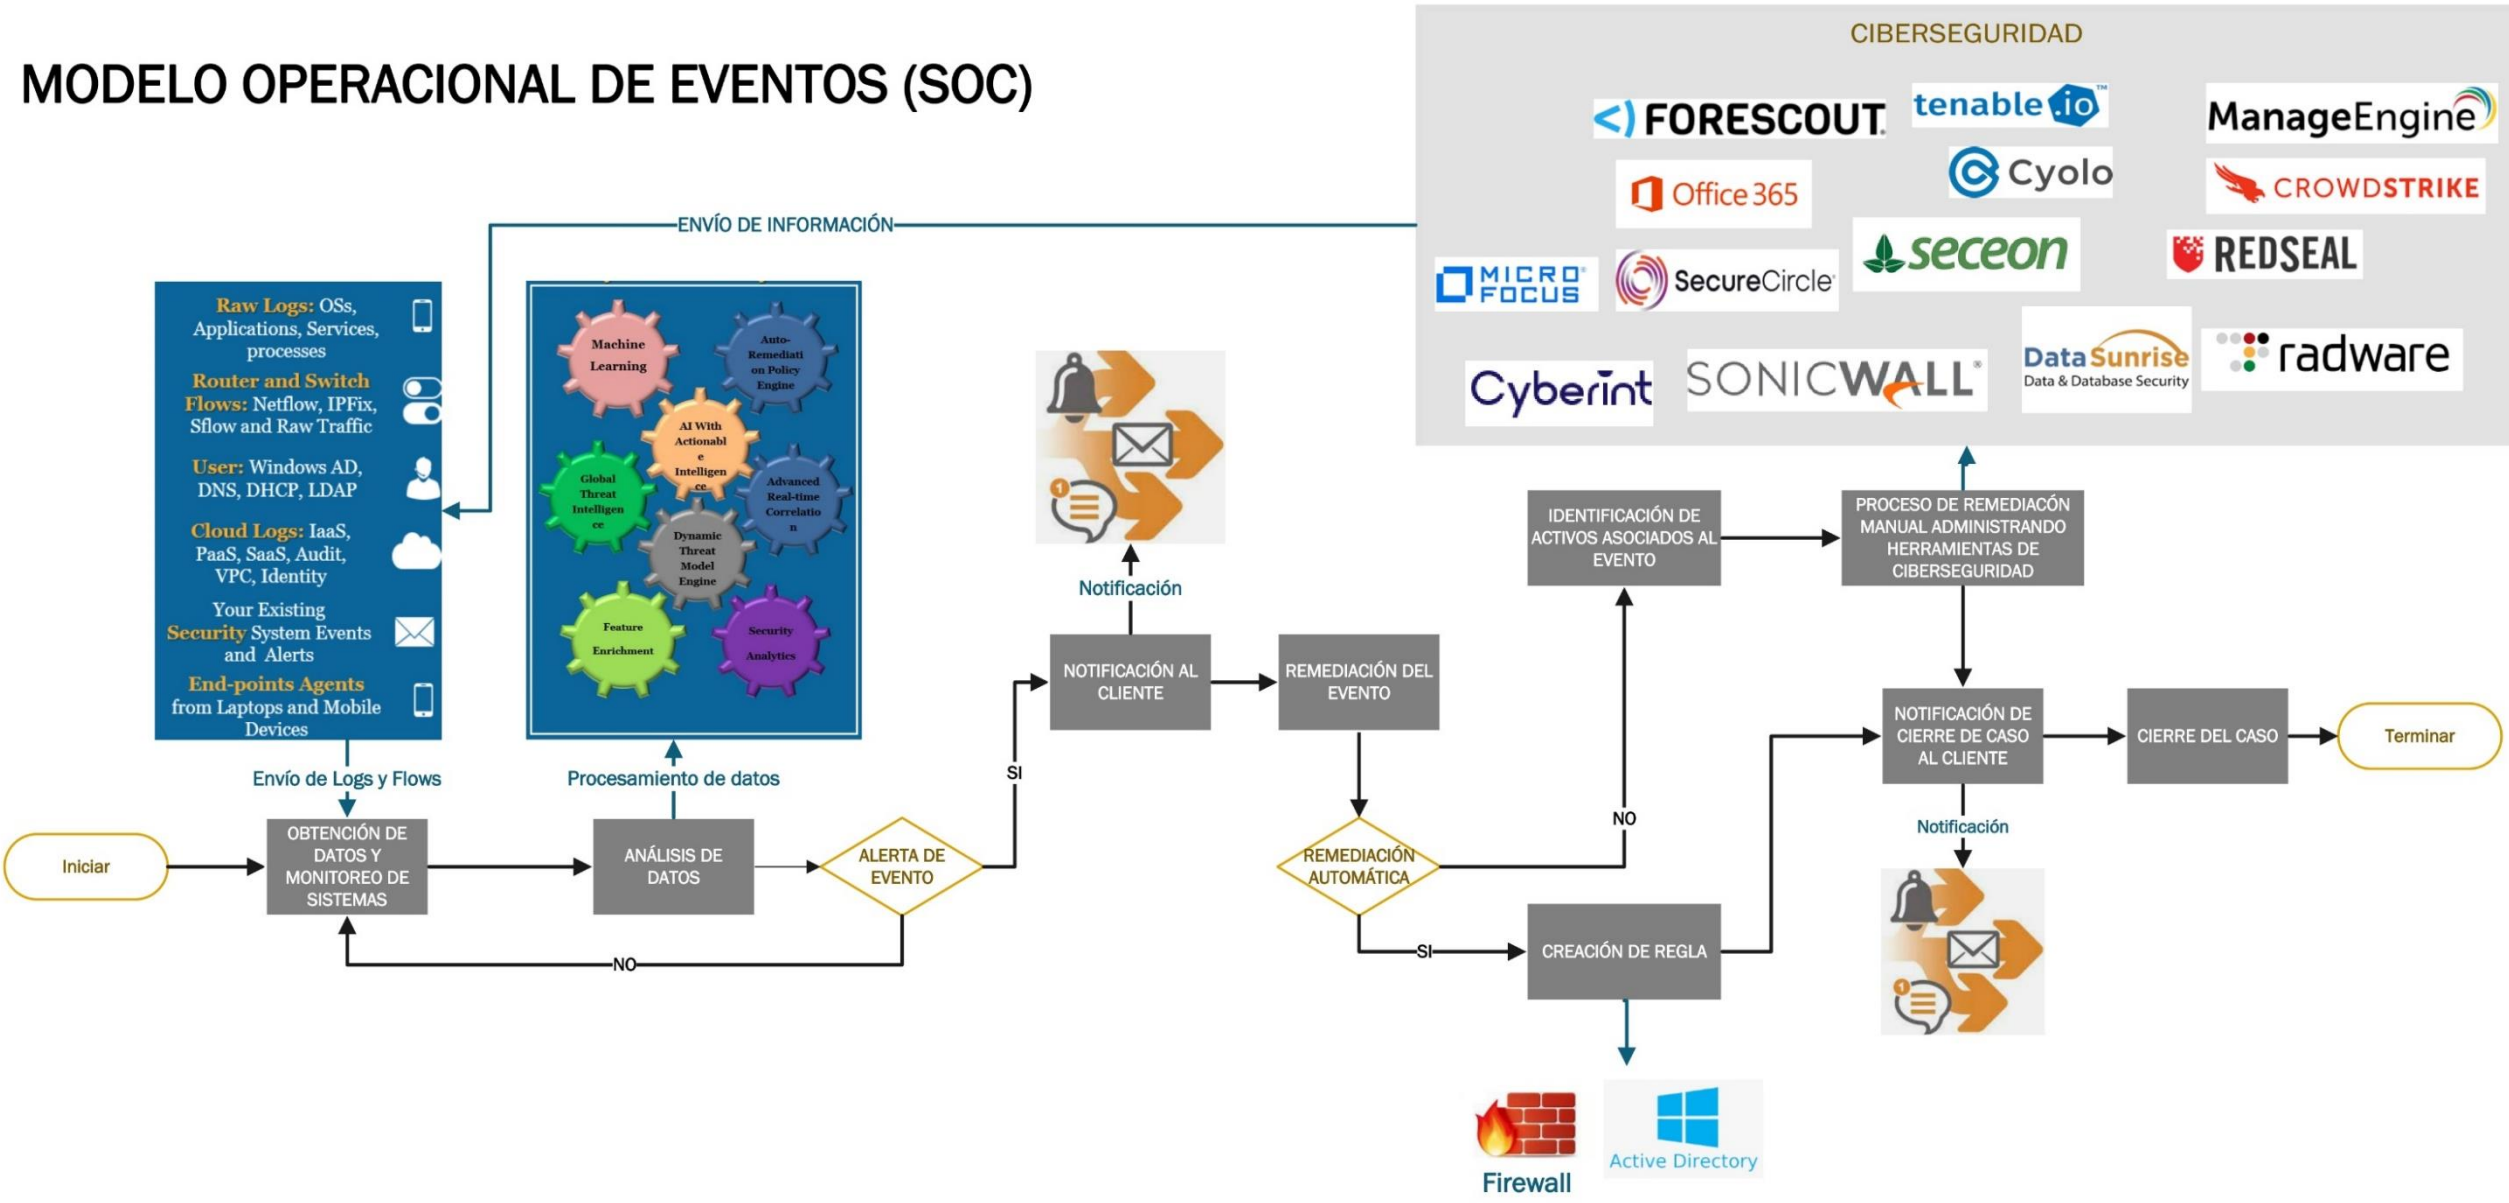

- Servicio 24x7 para detección continua, protección y respuesta a incidentes.
- Disminuye el impacto de los ataques.
- Solución como servicio, escalable y customizable, que aporta un importante ahorro de costes.
- Integración con más de 150 Tecnologías.
- Visibilidad en tiempo real de las amenazas.
- Respuesta automática inmediata frente a posibles incidentes de seguridad.

MODELO OPERACIONAL DE EVENTOS (SOC)

 Una plataforma de **inteligencia artificial** y aprendizaje automático basada en la arquitectura **Big / Fast Data**

 **Detección y remediación de amenazas** integrales integradas en una sola plataforma

 Fuera de la caja - **presenta automáticamente** solo **amenazas analizadas / verificadas**, sin ajustes nunca

 Aprovecha la inteligencia artificial para **detectar y detener las amenazas, sin intervención humana**

 **Un agente aiXDR** especialmente diseñado que **rastrea** todos los activos **incluso cuando no están en la red de la empresa**

 Una **solución integrada** que cubre el cumplimiento y un amplio **espectro de casos de uso**

CYBERSOC V-LATAM

(SIEM+SOAR+UEBA+NBAD/NTA+TI+IDS/IPS+ML+AI+VA+EDR: Comprehensive Cybersecurity for Digital-Era)

TECNOLOGÍA DE PUNTA EN NUESTRO CYBERSOC

Micro Service architecture based on Docker Containers

Built on Highly scalable Proven platforms and Frameworks

Extensible and Pluggable Design with standard Open Interfaces (REST,JSON..)

Flexible deployment model
Ansible, Docker, DevOps

Functional programming
Lazy loading

Lambda Data Processing Architecture
With proven Big/Fast Data patterns

Kafka can ingest up to
50B events per day

Spark Streaming has been benchmarked to handle **150M events per second**

Elastic Search **indexes 50TB of documents per day**

Python machine learning library includes contemporary algorithms

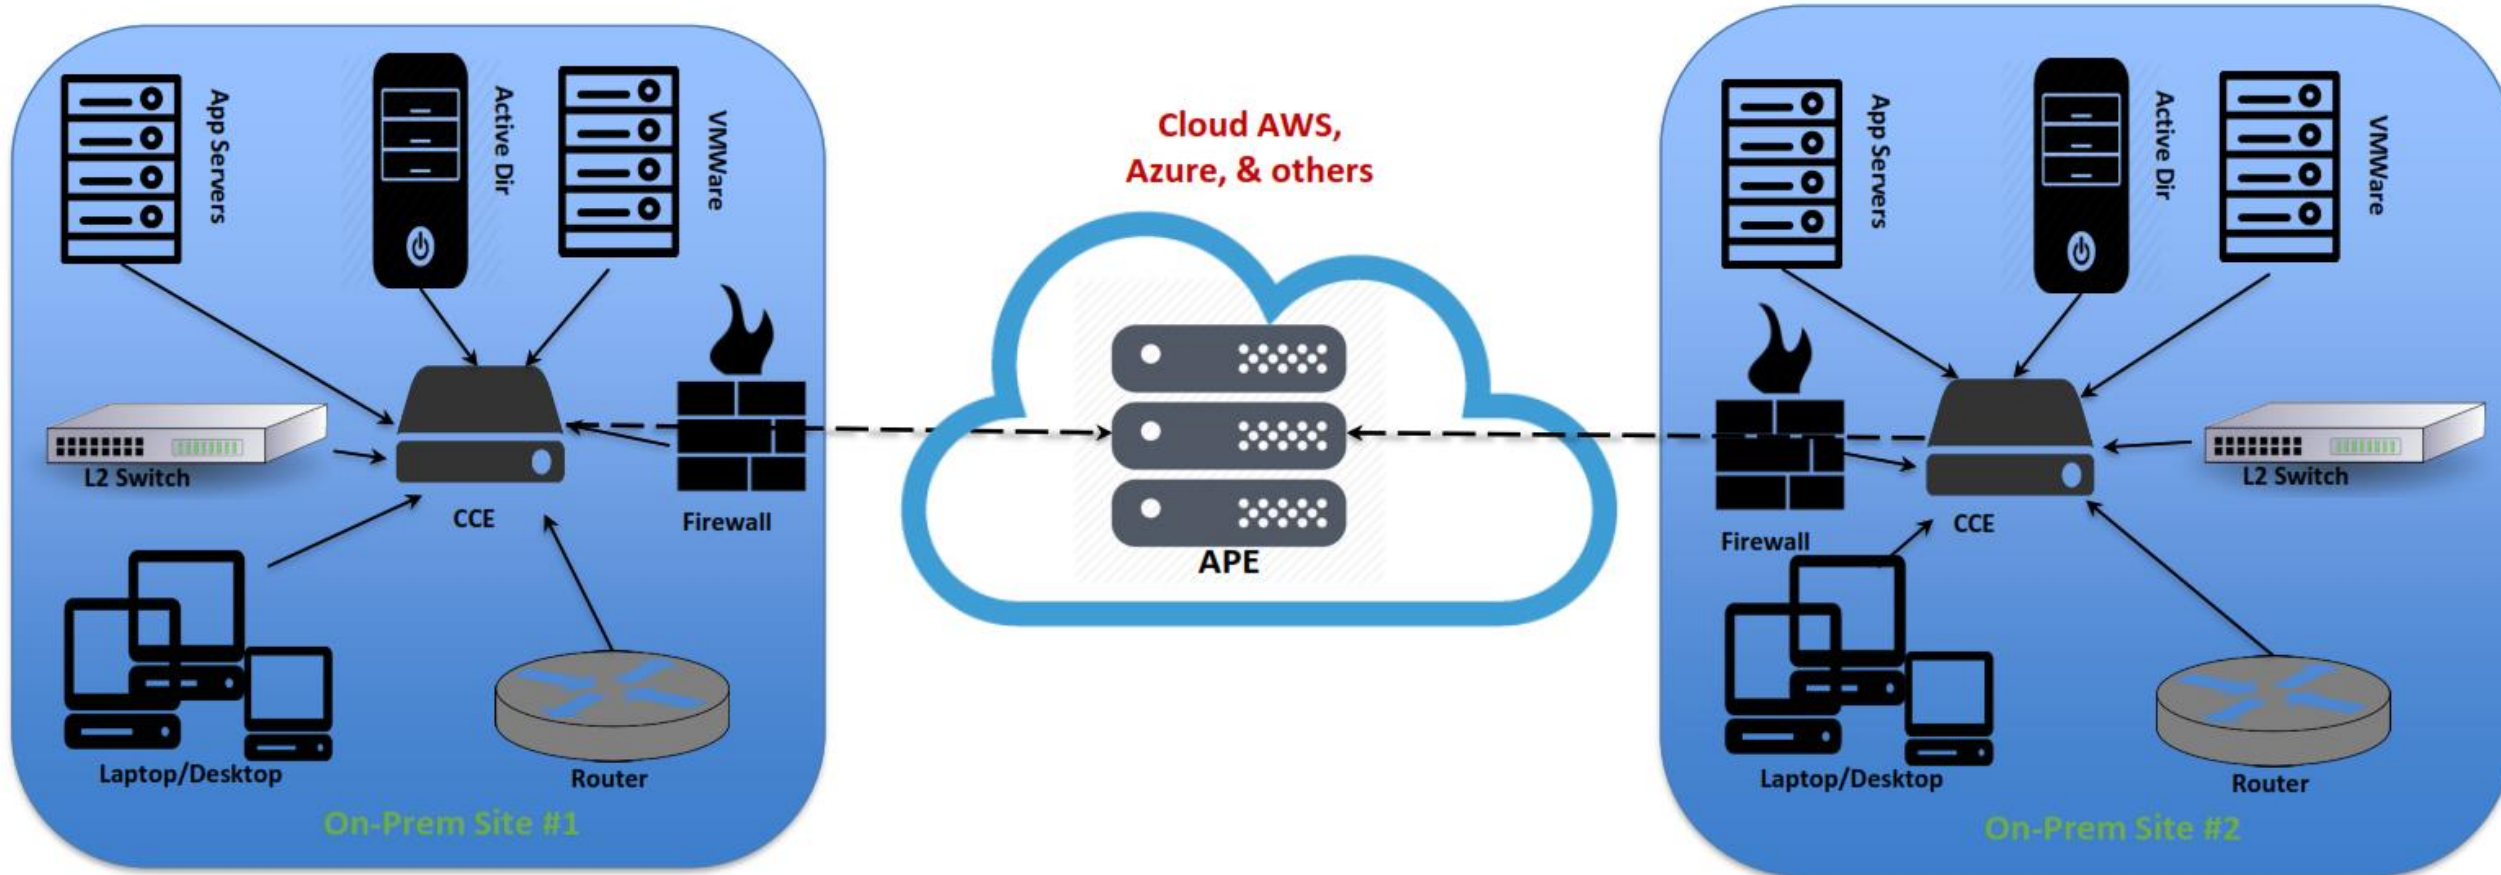

NodeJS server is proven to handle
Millions of User requests per second

Cassandra can scale to **400K operations per second**

Pre-packaged Processes

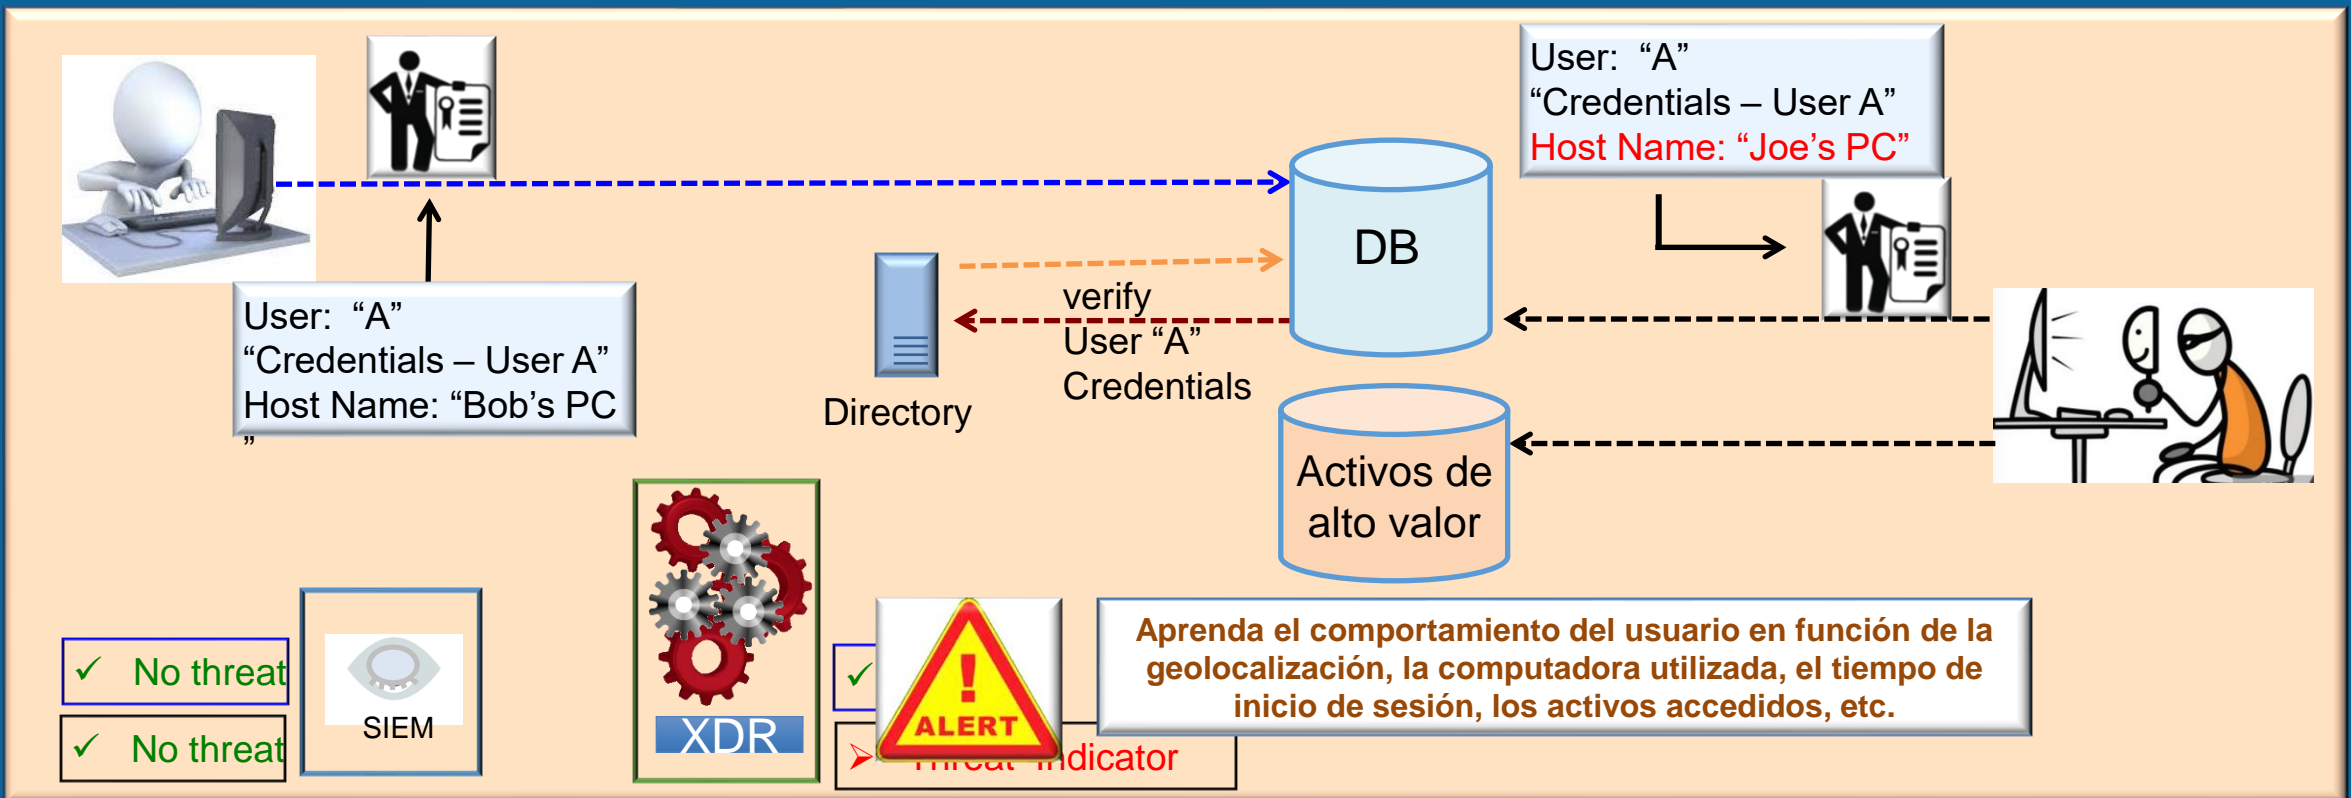

Proven set of fully functional engines

ARQUITECTURA CYBERSOC

Use Case: Compromised Credentials

- Las credenciales comprometidas representan el 75% del robo de datos
- La mayoría de las soluciones de seguridad tradicionales son ciegas a casi todas las formas de credenciales comprometidas.
- Seceon detecta todas las formas de uso de credenciales comprometidas en tiempo real para fuentes externas o internas

CYBERSOC : Casos de Uso

(SIEM+SOAR+UEBA+NBAD/NTA+TI+IDS/IPS+ML+AI+VA+EDR:
Comprehensive Cybersecurity for Digital-Era)

Una plataforma integrada que cubre un conjunto completo de casos de uso y proporciona cumplimiento continuo

Cyber Crime

- Ransomware*
- Malware*
- Spyware*
- APTs
- Potential Infiltration
- Botnet Detection
- Trojan Activity

- *All Known and Zero-Day

Insider Threats

- Malicious Insider
- Compromised Credentials
- UEBA
- Privilege Misuse
- Suspicious Login

Cloud Security

- IaaS
 - AWS, GCP, Azure
- SaaS
 - O365
 - Azure AD
- PaaS
- CASB
 - API-based

Denial of Service

- Volumetric
- Application Layer
- Protocols
- ICMP
- Amplification
- SYN Attack

Strict Policy Enforcement

- Limit access to Critical Assets
- Stop Unwanted Connectivity, Applications
- Network Segregation and Segmentations
- Catch multi-stage, multi-vectors malware/ransomware attacks Proactively

CYBERSOC : Casos de Uso

(SIEM+SOAR+UEBA+NBAD/NTA+TI+IDS/IPS+ML+AI+VA+EDR: Comprehensive Cybersecurity for Digital-Era)

Threat Hunting

- Explore de manera proactiva todo su entorno en busca de posibles vulnerabilidades y amenazas aprovechando la inteligencia de amenazas global y el análisis contextual y de comportamiento. Esto incluye inicios y cierres de sesión, eventos de archivos, actividad de dispositivos USB, etc..

Incident Response & Forensics

- Respuesta automatizada en tiempo real que satisface las necesidades anticipadas de la organización.
- Recopile datos relevantes para las fases de un ataque, como explotación, instalación, C&C y movimiento lateral.
- Almacene datos forenses detallados para la investigación posterior al incidente.

File Integrity Monitoring

- Detectar actividad ilícita
- Diagnosticar cambios no deseados
- Gestión de mandatos de cumplimiento

Data Loss Prevention

- Utiliza un mecanismo de detección de anomalías
- Proporciona visibilidad de los datos almacenados en todos los puntos finales (dentro y fuera de la organización)

New Elimination Options

- Poner en cuarentena la estación de trabajo
- Mata el proceso
- Restablecer la conexión de red

ALGUNAS DETECCIONES EN CLIENTES REALES

NUESTRA
TECNOLOGÍA
DETECTÓ UN
SERVIDOR QUE HACÍA
CONSULTAS A
DOMINIOS NO
PERMITIDOS

1. Seceon en conjunto con su módulo de Machine Learning detectó el comportamiento sospechoso del equipo dc el cual realiza conexiones a distintos host internos y externos (alrededor de unas 50 conexiones el día de hoy 08 de enero).

Alert Level: Major
Alert Type: Botnet Detected
Alert Message: The Host dc is participating in a DNS Outflood.
Alert Status: Open
Alert ID: 6027269010853513927

Legend: Host/User Network Application Machine Learning
